I often travel and have the need to have accurate and up to date weather and traffic information, when I need it without searching through an endless array of stations. I often find that local station only provide the weather and traffic at certain times (less than twice an hour) and you have to be lucky enough to be tuned in when they decide you will get it. Since I purchased and paid with my money for the XM Satellite radio service I have been able to get this information, accurate and up to date without having to wade through channels, wait until the local stations decide to offer usually vague information, and are forced to listen to music I do not like, if the information is even correct, and not an hour old. I am STRONGLY OPPOSED TO HR 4026, and resent the fact that some lobbyist with endless pockets would speak on my behalf, or pretend to represent the interest of the public. I feel XM Radio has the right to broadcast this information to it's subscribers and rather than trying to bully or buy the right to stop this from happening maybe the broadcasters should try improving their service.

I hope my opinionions will be considered and that HR 4026 will be stopped before it is even considered.
